

# Garage/Shop Propane Heater

## Start Up

1. Open valve on propane tank
2. Switch on or plug in heater
3. Depress valve on heater and turn to first stop position
4. Hold depressed at that position for about 5 seconds (much like lighting a pilot light)
5. Release valve and turn up further if it remains burning

## Shut Down

1. Turn valve down to lowest setting, 1<sup>st</sup> stop
2. Let it run about 3 seconds to dispel excess gas
3. Depress and turn valve to turn off
4. Close propane tank valve
5. Let heater run until warm, but not hot. Doesn't have to be cold.

***BE SAFE!!***
